

FILINOV DMITRY

+7 (913) 064 21-57 | dm.filinov@gmail.com | [Telegram](#) | [Leetcode](#) | [GitHub](#)

Data Scientist with hands-on experience in machine learning and data analysis.
Worked with NLP, computer vision, and applied ML systems development.

WORKING EXPERIENCE

Yandex / International Search <i>Machine Learning Intern</i>	06.2026 – 08.2026
• Alerts and Alert Investigator: independently implemented and deployed a statistical alerting system and an LLM agent for automatically investigating product metric changes. The agent analyzes problematic dialogues, identifies patterns, clusters cases, and tests hypotheses. The team uses it to narrow the scope of manual investigation. • Success metric: integrated an LLM-based metric into A/B testing, making it available to agent developers for evaluating product changes. Adapted the metric calculation for additional user scenarios. • Success model development: ran offline experiments to improve success evaluation quality. Tested hypotheses about using additional context and compared prompt variants. • Language classifier: developed a prototype and handed it over to agent developers. Evaluated its quality and analyzed errors. Built a data preparation pipeline for distillation. • Product analytics: built a DataLens dashboard to analyze the relationship between response time and user behavior. Prepared the data and automated recurring metric calculations. Provided analytical breakdowns to several product teams. Agent teams used the data when discussing response latency.	
JSC “Ploshchad” <i>Machine Learning Intern, online</i>	09.2023 – 01.2024
• Built a PyTorch U-Net to segment smoke and fire in UAV video. Compared YOLOv8, TensorFlow, and PyTorch approaches, reaching 0.80 test mIoU, 0.88 precision, and 20 FPS on an NVIDIA V100. • Implemented the training and evaluation pipeline, including data loading, IoU, precision, a custom recall metric, result visualization, and video inference.	
Siberian Generating Company, Novosibirsk Thermal Power Plant-2 <i>Non-commercial ML project</i>	03.2023 – 07.2023
• Trained and benchmarked linear models, Random Forest, CatBoost, XGBoost, and a PyTorch neural network to forecast specific fuel consumption from power-plant operating data. The best XGBoost model achieved a test R^2 of 0.94, compared with approximately 0.65 for the plant’s previous model. • Built an inference API and an Excel client that sends operating data to the service and writes forecasts into existing workbooks. • Worked directly with the client on site at the power plant: held in-person meetings, gathered and clarified requirements, broke down the work, and created tasks for the team.	

SKILLS

Core	Python, SQL/YQL, YT, Git
ML & NLP	PyTorch, scikit-learn, TensorFlow, LLM evaluation, embeddings, clustering
Product & Statistics	A/B testing, statistical testing, retention, product analytics
Data & Visualization	NumPy, Pandas, S3, Redis, DataLens, Matplotlib, Plotly
MLOps & Backend	Docker, ClearML, Poetry, FastAPI, Flask
Computer Vision	OpenCV, Torchvision, YOLO
Languages	Russian (native), English (upper-intermediate)

SELECTED ACHIEVEMENTS

Digital Breakthrough: AI Season – 2nd place (2023), 3rd place (2024)	All-Russian
Governor’s Cup in Computer Vision – team winner, individual 2nd place	Regional
DANO – 2nd degree (2022), finalist (2023)	All-Russian
National Technological Olympiad in Big Data and ML 2024 – Top 8	All-Russian
Data Fusion Contest – Top 14 (2025), Top 15 (2026)	All-Russian

EDUCATION

National Research University Higher School of Economics (HSE) <i>BSc in Applied Data Analysis</i>	Moscow, Russia 09.2024 – present
University of London + academic direction from LSE <i>BSc in Data Science and Business Analytics (DSBA)</i>	London, UK, Online 09.2025 – present
Moscow Institute of Physics and Technology (MIPT) <i>Deep Learning School, Basic Course</i>	Online 09.2022 – 06.2023
